Chapter 1. Development of High-Severity FCC Process: An Overview

Y. Fujiyama, M. H. Al-Tayyar, C. F. Dean, A. Aitani and H. H. Redhwi

Abstract	1
1. Introduction	2
2. Features of HS-FCC	2
3. Experimental	3
4. Results	7
5. Concluding Remarks	11
Acknowledgments	12
References	12

Chapter 2. Discrepancies in FCC Catalyst Evaluation of Atmospheric Residues

Sven-Ingvar Andersson and Trond Myrstad

Abstract	13
1. Introduction	13
2. Experimental	15
3. Results and discussion	17
4. Conclusions	28
References	28

Chapter 3. Exploring FCC Flexibility to Produce Mid-distillates and Petrochemicals

William R. Gilbert, Claudia A. Baptista and Andrea R. Pinho

Abstract	31
1. Introduction	31
2. Experimental	33
3. Results and discussion	35
4. Conclusions	38
References	39

Chapter 4. Increasing LCO Yield and Quality in the FCC:

Cracking Pathways Analysis

Avelino Corma and Laurent Sauvanaud

Abstract	41
1. Introduction	41
2. Experience in gas oil cracking	43
3. Cracking of long-chain paraffins	44

4. Cracking of one-ring naphthenes and aromatics	47
5. Cracking of molecules with two fused rings	49
6. Cracking of molecules containing three or more fused rings	51
7. Conclusions	53
Acknowledgment	53
References	53

Chapter 5. Catalyst CGP-1 for MIP-CGP Process to Increase Cleaner Gasoline and Propylene Production

Long Jun, Lin Wei, Qiu Zhonghong, Tian Huiping and Zhu Yuxia

Abstract	55
1. Introduction	55
2. Experimental	57
3. Results and discussion	58
4. Summary	66
Acknowledgment	66
References	66

Chapter 6. CO Combustion Promoters: Past and Present

Arthur W. Chester

Abstract	67
1. Introduction	68
2. Background	68
3. Early development of CO combustion promoters	69
4. Activities of other metals	70
5. Early commercialization of promoted catalysts	72
6. Subsequent developments	74
7. Conclusions	76
References	76

Chapter 7. FCC Regenerator Simulation by Lambda Sweep Testing

David M. Stockwell

Abstract	79
1. Introduction	80
2. Theoretical development	81
3. Experimental methods	83
4. Results	87
5. Discussion	97
6. Conclusion	101
Note added in proof	101
References	101

Chapter 8. Toward a New Generation of NO_x Additives

David M. Stockwell

Abstract	103
1. Introduction	104

2. Catalytic approaches for 20ppm NO _x	105
3. Experimental methods	107
4. Results	109
5. Discussion	119
6. Conclusions	122
References	123

Chapter 9. Simulation of FCC Equilibrium Catalyst Age Distribution by Using a Deactivation Model

Luis O. Almanza

Abstract	125
1. Introduction	125
2. Experimental	126
3. Results and discussion	130
4. Conclusions	135
Acknowledgments	135
References	135

Chapter 10. Intra-particle Mass Transfer and Contact Time Effects in Fluidized Catalytic Cracking

David M. Stockwell

Abstract	137
1. Introduction	137
2. Theoretical development	138
3. Results	141
4. Discussion	143
5. Conclusions	145
Nomenclature	145
References	146

Chapter 11. Equilibrium FCC Catalyst Performance Simulation based on Mixtures of Hydrothermal Deactivated Samples

Luis Antônio S. Casali, Sônia D. F. Rocha, Maria Laura A. Passos, Raquel Bastiani, Ricardo D. M. Pimenta and Henrique S. Cerqueira

Abstract	147
1. Introduction	147
2. Material and methods	150
3. Results and discussion	156
Conclusions	160
References	161

Chapter 12. NMR Studies of FCC Feeds, Catalysts and Coke

Babita Behera, Siddharth S. Ray and I. D. Singh

Abstract	163
1. Introduction	164
2. Experimental	170
3. Results and discussion	175

4. Conclusions	195
Acknowledgment	197
References	197

Chapter 13. Studies of Iron Effects on FCC Catalysts

Zhu Yuxia, Du Quangsheng, Lin Wei, Tang Liwen and Long Jun

Abstract	201
1. Introduction	201
2. Experimental	202
3. Results and discussion	204
4. Conclusion	211
Acknowledgment	211
References	212

Chapter 14. Catalytic Cracking to Liquids (BTL) Fuels with Novel Cracking Catalysts

A. A. Lappas, M. Papapetrou and I. A. Vasalos

Abstract	213
1. Introduction	213
2. Experimental	214
3. Results and discussion	216
4. Conclusions	225
Acknowledgments	225
References	225

Chapter 15. Catalytic Cracking: The Future of an Evolving Process

Paul O'Connor

Abstract	227
1. Introduction: FCC a historical perspective	227
2. The future of FCC and the possible end of a mature process	229
3. Drivers for innovation: challenges and opportunities	233
4. Advanced fuels and petrochemicals	234
5. Very heavy resid conversion	238
6. Unconventional new feedstocks: tarsands and biomass	244
7. Back to the future: science fiction or future science	249
8. Concluding remarks	250
References	250

Chapter 16. Principles of the SO_x Reduction Technology in Fluid Catalytic Cracking Units (FCCUs)

Louis M. Magnabosco

Abstract	254
1. Introduction	255
2. Fundamentals	256

3. Development approach	257
4. Experimental techniques for activity and stability determination	258
5. Analytical methods and material characterization	260
6. Development and basis of Arco's SO_x reduction technology	262
7. Industrial competition	263
8. Importance of proper activity/stability testing	265
9. Discussion of published results	266
10. Progress in SO_x agents performance	268
11. Summary and conclusions	268
Acknowledgment	270
I. Appendix	270
II. Appendix	278
III. Appendix	284
IV. Appendix	288
V. Appendix	293
VI. Appendix	298
VII. Appendix	300
References	303

Chapter 17. Evaluation of Commercial SO_x Agent Effectiveness via Fundamental Mathematical Model

Louis M. Magnabosco and Ozie S. Owen

Abstract	307
1. Introduction	307
2. Mathematical model	308
3. Simulations of commercial tests – HRD series	310
4. Simulations of more recent SO_x products	312
5. Model parameters, agent efficiency	315
6. Standard measure of efficiency vs. realistic measure of efficiency	316
Acknowledgment	318
References	319
Subject Index	321
