The fall-out from many high profile crises in governance and leadership in recent decades, from banking to healthcare, continues to be felt around the world. Major reports have questioned the values and behaviour, not just of individual organizations but of professionals, industries and political leadership. These reports raise questions about business corporations and also public service institutions. In response this new series aims to explore the broad principles of governance and leadership and how these are embodied in different contexts, opening up the possibility of developing new theories and approaches that are fuelled by interdisciplinary approaches. The purpose of the series is to highlight critical reflection and empirical research which can enable dialogue across sectors, focusing on theory, value and the practice of governance, leadership and responsibility.

Written from a global context, the series is unique in bringing leadership and governance together. The King III report connects these two fields by identifying leadership as one of the three principles of effective governance however most courses in business schools have traditionally treated these as separate subjects. Increasingly, and in particular with the case of executive education, business schools are recognizing the need to develop and produce responsible leaders. The series will therefore encourage critical exploration between these two areas and as such explore sociological and philosophical perspectives.
