

Molecular and Integrative Toxicology

Series Editors

Jamie C. DeWitt, East Carolina University, Greenville, NC, USA

Sarah J. Blossom, Department of Pharmaceutical Sciences, College of Pharmacy,
University of New Mexico, Albuquerque, NM, USA

Molecular and Integrative Toxicology presents state-of-the-art toxicology in a useful context. Volumes emphasize the presentation of cellular and molecular information aimed toward the protection of human or animal health or the sustainability of environmental systems. This book series is committed to maintaining the highest level of integrity in the content published. It has a Conflict of Interest policy in place and complies with international, national and/or institutional standards on research involving Human Participants and/or Animals and Informed Consent. The Book series is a member of the Committee on Publication Ethics (COPE) and subscribes to its principles on how to deal with acts of misconduct thereby committing to investigate allegations of misconduct in order to ensure the integrity of research. This book series may use plagiarism detection software to screen the submissions. If plagiarism is identified, the COPE guidelines on plagiarism will be followed.

Content published in this book series is peer reviewed. It solicits reviews from the senior editors of the volume since they are the experts in the field, and they are already known to the authors. In cases, however, where there are particular concerns, a single-blind review system is used where independent external experts are asked for advice. These reviewers know the names of the authors, but the identities of the reviewers are unknown to the authors. Submitted manuscripts are reviewed by at least two experts (the senior editors of the volume and or the consulting editors) as well as the series editor. The reviews evaluate whether the manuscript is scientifically sound and coherent, whether it meets the guidelines regarding style, content, and level of writing. The volume editors decide on the suitability of the manuscript based on their reviews.

Titles in this series are indexed in SCOPUS.

Contents

The Use and Predictability of <i>C. elegans</i> as an Alternative and Complementary Model in Neurotoxicological Studies: Focus on the Dopaminergic System	1
Marina Lopes Machado, Daniele Coradini Zamberlan, Leticia Priscilla Arantes, Michael Aschner, and Félix Antunes Soares	
Emerging Contaminants as Contributors to Parkinsonism: Heterocyclic Amines	19
Rachel Foguth and Jason Cannon	
Aberrant Dopamine Homeostasis as a Focal Point in the Mechanism of Environmental Contaminant-Induced Dopaminergic Dysfunction	39
Brianna S. Cagle, Rachel A. Crawford, and Jonathan A. Doorn	
The Environmental Contribution to Redox Dyshomeostasis in Parkinson's Disease	69
Carla Garza-Lombó and Rodrigo Franco	
PKC-Delta Is a Major Molecular Target for Diverse Dopaminergic Toxicants: Implications for Mechanistic and Translational Neurotoxicology	103
Zainab Riaz, Adhithiya Charli, Hannah Wickham, Huajun Jin, Gary Zenitsky, Vellareddy Anantharam, Arthi Kanthasamy, and Anumantha G. Kanthasamy	
Pesticides Exposures and Parkinsonism: Experimental and Epidemiological Evidence of Association	131
Nikolay M. Filipov	
Index	155
